

Environmental Policy

Generation 4 Construction delivers a comprehensive service from project inception through design, manufacturing and construction to operation and maintenance.

At Generation 4 Construction we take our environmental responsibilities seriously and strive to minimise the impact of our activities, including those of our subcontractors and suppliers. We also commit to pollution prevention and protection of the environment; identifying, monitoring and managing environmentally significant activities and considering the life cycle impacts of our supply chain.

The directors of Generation 4 Construction recognise the need to minimise our impacts, and we are committed to enhancing relationships with local communities and charitable organisations.

As part of our commitment to environmental leadership, Generation 4 Construction will aim to:

- Comply with all relevant environmental legislation.
- Reduce the use of energy, raw materials and waste production whilst increasing biodiversity where opportunities exist, throughout our activities.
- Ensure all staff have an awareness of environmental management, and through our training programme ensure environmental leadership throughout our business.
- Maintain our Environmental Management Systems (which is certified to BS: EN ISO 14001:2004).
- Continually improve our performance, by setting progressive environmental objectives and targets. These targets will include year on year energy and greenhouse gas emission reductions.
